*I work as a Fullstack Developer, mainly focused in Javascript. I have experiences working with fintech, retail and transport industries.*

*I enjoy a lot working and researching on new technologies, with small, simple, yet very effective solutions. My favorite frameworks/libraries/runtimes are Angular 2+ and React.js, but I also know Node.js and .NET (C#).*

*I love to help and guide people around with my current knowledge, and I am always willing to learn new things. I do a lot of research in order to share it later with everyone whenever I can. Always open to learn a new language or technique!*

*I like to work under Agile methods and Scrum/Kanban teams as well.*

---

## Technical Skills

**Likes:** javascript typescript reactjs react-redux angular node.js go express c# .net-core vue.js vuetify.js nestjs next.js

---

## Experience

*Jun 2021 → Mar 2022* **Backend Developer** – X-Team  
javascript, reactjs, node.js, cloud, salesforce, angular

Backend Developer role for Rstudio, specializing in Node.js. Worked with Salesforce APIs, OAuth Integration, AWS Lambdas and Step Functions for the Business Automation branch.

---

*Mar 2019 → Jun 2021* **Consultant** – Amaris  
angular, typescript, javascript, node.js, nestjs, vue.js, vuetify.js, salesforce

Consultant role as a Full-stack developer in Angular 8+, Vue.js, Node.js and Typescript for different clients, including Banking and Transport Services (Consortio Banking and Sodexo).

- Sodexo: Made in Angular 8+, we had to make a complete overhaul of the company's transport service Movilpass ([www.movilpass.cl](http://www.movilpass.cl))
- Consortio: Consortio required to be made a Portability Banking web portal, which helps potential new clients to bring their current banking products from other banks to Consortio.

Frontend was made in Vue.js and deployed in Modyo as the CMS.

Rest APIs were made in NestJS, integrating different services from Consortio. We used Redis for cache, CI/CD with Gitlab and AWS to host the microservices with Docker and Kubernetes.

The service had cloud integration with AWS Lambda, API Gateway and Salesforce API.

We integrated with the Salesforce API to upload documents and process the portability requests to Consortio's executives for potential leads.

---

*Nov 2018 → Feb 2019* **Developer** – Lagash  
node.js, express, reactjs, sql-server

Full-stack developer for a car insurance company called Tanner, using NodeJS and ReactJS.

- We developed a car insurance backoffice web portal fully hosted in Microsoft Azure.
- Backend was made in Node with Restify, using Azure's cloud databases for storage.
- Frontend was made using React + Redux and Material UI for the components. We had to integrate our microservices made in Node with the frontend app.

---

*Oct 2017 → Aug 2018* **Solutions Analyst** – [Everis](#)  
angular, node.js, angular-material

Front-end developer in Angular 2+/NodeJS for BCI (Office Banking), as a part of their Migration and Digital Transformation process.

- We worked in a huge Agile project which involved around five agile squads all working on the same product. Dailies and meetings were big!
- My squad had two frontend devs, two backend devs completely dedicated to Spring Boot, one QA person and one Tech Lead to guide us. I was one of the frontend devs.
- We frontend devs had also to develop not only in Angular, but also in the app's BFF (Backend for Frontend) that was made in Node.js with Express. Our job was to call the microservices made in Spring Boot and process/format the data ready for the frontend to use it.
- Technologies used: Angular 2+ (native, Material) and NodeJS (with Express).

---

*Sep 2015 → Oct 2017* **Developer** – [Defontana](#)  
c#, .net, asp.net, asp, vbscript, asp.net-mvc

.NET and VB Developer in ERP Products, Continuous Integration, and Backend REST solutions for Defontana's Digital Transformation process.

Technologies used: C#, VB.NET, WCF (microservices), MS Web API, ASP.NET, Razor, SQL Server 2018

Legacy technologies: VB 6, ASP

---

*Apr 2015 → Aug 2015* **Backend Developer** – [Tuten](#)  
java, jax-rs, postgresql

Backend designer, REST services programmer, Database developer.

- TUTEN is a web/mobile app service that helps people search for professional household services (painting, plumbers, electrical, etc). Works similar to Uber.
- I designed the database and REST services for TUTEN app's first version.
- With the team, we travelled to Boston, USA for 3 months to MassChallenge's 2015 startup accelerator conference, to learn how to boost the startup business process and development cycle.

Technologies used: Java, JAX-RS, Postgres SQL

---

*Jan 2011 → Mar 2015* **Developer** – [TAISA Chile](#)  
c#, java, asp.net, asp, sql-server

Software Developer for web and mobile solutions, using .NET (C#, ASP.NET), Java (EE and WebSphere), SQL Server, PHP, plus maintaining some other legacy software used in Banking made in ASP and Javascript with jQuery. Clients worked with: Santander, SURA, Corpbanca.

Technologies used: C#, Java, ASP.NET, Javascript, jQuery, ASP, SQL Server.

---

## Education

*Jan 2005 → Jan 2010* **Bachelor in Computer Science** – DUOC UC  
java, c#, html, php

Focusing in Microsoft Technologies, and volunteer work in the Microsoft Student Partners program, educational talks in technology to local college.

---

## Others

*Jun 2020* **Scrum Foundation Professional Certificate** – Certification  
scrum, agile

Scrum Foundation Professional Certificate from CertProf

---

*May 2020* **React Development Certification Course** – Certification  
reactjs

React Development Certification Course from Programming Hub

---

*May 2020* **HTML Certification Course** – Certification  
html

HTML Certification Course from Programming Hub

---

*May 2020* **JavaScript Certification Course** – Certification  
javascript

JavaScript Certification Course from Programming Hub

---

*May 2020* **JavaScript Tutorial Course** – Certification  
javascript

JavaScript Tutorial Course from SoloLearn

---

*May 2020* **C# Tutorial Course** – Certification  
c#, .net

C# Tutorial Course from SoloLearn

---

*May 2020* **React + Redux Course** – Certification  
reactjs, react-redux

React + Redux Course from SoloLearn

---

*May 2020* **CSS Certification Course** – Certification  
css

CSS Certification Course from Programming Hub
